

Interview Transcript

Team 5: Flores Caetano, Guaman Jordan, Jaya Carlos, Jumbo Alex

Done to: Miriam Tul, owner of "Bethsabé boutique"

Conducted by: Carlos Jaya

- 1. ¿Are there any areas of your work that you think you could use some technological help?**
 - a. "I think I could use some help with managing the dresses and who they belong to, as well as the entrance and dispatch dates of each dress or arranged clothing "
- 2. ¿What are the main functions that you think the software would need?**
 - a. "Maybe an inventory managing system, a data base of all the clients including their current measurements, the dress model they wanted, if they delivered the fabric or not. A Schedule with the important dates of the process, "
- 3. ¿How do you currently manage your inventory? ¿What type of information do you need for the software's inventory to manage?**
 - a. "Currently I do it manually, but I would like to have it in detail in the software, detailing the name, measurements, and dress model of each client as well as all the important dates regarding each client "
- 4. ¿What are the main processes for each client?**
 - a. "Mainly, the clients come on their own for the first time, afterwards, we set up dates for important parts of the process: taking measures, delivering the fabric, trying the dress many times and making corrections should the dress needs it up until the point in which the customer is completely happy with the product "
- 5. ¿Do you currently have a data base? If the system has done, ¿What information would you like the data base to manage?**
 - a. "I do not possess a data base currently, besides some written data I keep from recent clients. Although I would like for the system to keep data for me about the clients, the information that I said to you before"
- 6. ¿Would you be the final user of the system? If so, would you like for us to tailor it for your specific needs by keeping in touch and showing you the developments we have over the course of its development?**
 - a. "I would be the final user of the software, and yes, I would like for you guys to keep me informed about the process of development"
